on behalf of the people and Government of the United States to welcome this great Congress to Washington.

'Prevention is better than cure.' The science of medicine and surgery has made wonderful growth in the last forty years, but in that time it would seem if the science of sanitation, of hy giene and of preventive medicine had come into being from nothing. And now the two, prevention and cure, through the intense energy, industry, application, keen discrimination and high and enthusiastic aims of the benefactors of human kind, who are now devoting their lives to research and the investigation of the causes of disease. its transmission and its antidotes, are proceeding, pari passu, with such rapidity and success that in the next century we may almost expect to find the equivalent of that fountain of youth and perpetual life which was sought for in this country by some of the early discoverers.

'It is easy to make an error with reference to the beginning of a great forward movement by dating it from the ime when the would be historian has become alive to its progress and convinced of its importance. Now, I do mean to say that our sanitary science in this country began with the Spanish War; I do not mean to say that it had its origin in the tropics; for I have no doubt that nearly every one who hears me could confute such statements. And yet it is true that out a war, very short of duration and of comparatively little importance in cost and the lives lost, there came to sanitation, the transmission and care of tropical diseases, the adoption and enforcement of a system of hygienic law and the establishment in the tropics of governmental institutions of medical research by army, navy and civilian physicians, which have brought follows: to the attention of the whole country to the attention of the whole country the necessity for widespread reform in Unterberger.

year, would have been impossible. The effort of the French to build a much smaller canal at the same place would doubtless have been successful but for the problems of hygiene, which the science of that day did not enable them to solve. And now it is proper that the chief health officer in charge of that strip forty miles long by ten miles wide, who has enabled 30,000 people to live there in health and build the canal, should share with the chief engineer, the honors when the end shall crown the work. It was most fortunate in working out the problems that agents of health on the Isthmus had no limitation put upon them with respect to expense, and that everything was at their hand to accomplish the purpose of the nation.

"Still greater opportunities for improvement are before us. We need to develop under agreements."

There is to be a great discussion over this platform and many believe that the nominations may not be reached until late Thursday night, and may go over until Friday and may go over until Friday and may go over until Friday and may go over until Saturday.

"You can't have an unbossed convention," added Mr. Ivins, "and have things go through as in a grist mill."

Chauncey M. Depew was in Europe on August 21, when delegates to the State convention were designated, and on September 17, when they were elected at the primaries. By an inadvertence ex-Senator the convention of his party since 1864.

Discuss Social Evil in Armies.

Problems of coping with social dis-eases among the enlisted men of the armies and navies of the world were discussed by leading medical experts of the mili-tary services of the United States, Gertary services of the United States, ber-many and Russia. Papers were read by Dr. E. von Vagedes of Dansic, Germany; Dr. Zohart, who was surgeon-general of the Baltic fleet of the Russian navy in the late Russo-Japanese war; Col. L. M. the Baltic fleet of the Russian navy in the late Russo-Japanese war; Col. L. M. Maus, United States army medical corps: Medical Inspector George A. Lung, U. S. N.; Major D. C. Howard, U. S. A., and Dr. G. A. Rost of the German navy. It was agreed that it would be useless to attempt to eradicate the social evil from the fighting service of the world. This subject, which has been threshed out by the heads of the various services for generations, is recognized as one which has not yet been settled to their satisfaction.

tion.

Major Howard voiced the sentiment of the conference in saying: "Since we cannot control the social habits of soldiers, it is essential that there shall be com-pulsory preventive measures."

Such measures are now compulsory in both services of all three of the coun-

tries represented, with the result, it developed, that within the last few years such diseases have been reduced between 25 and 60 per cent. In the American army they have been reduced by 52 per cent, and in the navy by more than 60 per cent.

Our Army Most Affected.

It developed that the United States army leads the armies of the world in the

army leads the armies of the world in the prevalence of such diseases, but the extent is being rapidly reduced through both preventive and educational measures.

The greatest influences in the reduction of these diseases are educational and moral measures, lectures by medical doctors, talks by chaplains, recreative and exhibiting features monthly obvained. and the raising of a sufficient fund by taxation to maintain an adequate health police.

Apologizing for being too busy with other affairs at this season to learn the meaning of the word "demography," that every Government that has determined the meaning and importance of the meaning and importance of "hygiene" and expressed the under
"hygiene" and expressed the under
"hygiene" and expressed the under-

operations of every fleet.

"Not only is the hospital ship the repair ship for the personnel of the fleet," said Admiral Stokes, "but it is as well a scientific unit aiming by means of chemical.

T. Newcomb of New York county issued an authorized statement reading:

"I am in favor of the nomination of Mr. Straus for Governor, overthrowing Tammany control in the State and insuring an able, sincere and patriotic administration. If necessary I shall present his name. If this is an open convention he will be nominated."

After this explanation concerning Jus-tice Hiscock a report was circulated to the effect that Attorney-General Carmody in a recent decision had interpreted the Levy election law as prohibiting a State convention from nominating one Judge, as in the case of Justice Hiscock, here and refusing to permit a committee from another convention or a convention or a State committee from completing the ticket, as in the case this year, when two Wandidates for the Court of Appeals are

to be nominated. Ex-Gov. White got into communica-tion with Attorney-General Carmody and

Ex-Gov. White got into communication with Attorney-General darge and the Attorney-General had ascertained that the Attorney-General had rendered no such decision.

The comments of Justice Hiscock concerning the Court of Claims decision, it was ascertained to-night, have determined the leaders and the delegates that Justice Hiscock shall be nominated here in order to refute an unwarranted comment on his judicial course. It was stated here to-night that Justice Hiscock is certainly to be nominated and several of the Republicans who are giving the Judiciary nominations special attention believe that the Democrats at Syracuse are to nominate as Justice Hiscock's colleague Maurice Spratt of Buffalo, a brother of Thomas Spratt of Ogdensburg.

All seeming trouble over the temporary and permanent, chairmageships has disconting the produced for the most spratt by Europeans, more particularly in the comment of cases. Specialists of the bureau of animal industry of the Agricultural Department are consulting with Dr. Brieger with the view of making experiments to determine whether the existing scourge which has already of approximately 20,000 horses and a large number of cattle in Nebraska and Kansas is in any way related to the coveries in any way related to the coveries in medical science, with the existing scourge which has a large number of cattle in Nebraska and Kansas is in any way related to the coveries in medical science, with the existing scourge which has carried off approximately 20,000 horses and kansas is in any way related to the coveries in existing scourge which has carried off approximately 20,000 horses and Kansas is in any way related to the coveries in existing scourge which has carried off approximately 20,000 horses and a large number of cattle in Nebraska and Kansas is in any way related to the coveries in existing scourge which has carried off approximately 20,000 horses and a large number of cattle in Nebraska and Kansas is in any way related to the coveries in a large number of cattle in Nebraska the ridding a race of the hook worm and its demoralizing physical degenera-tion—all constitute great steps forward in the treatment of diseases that though

made it is most satisfactory to be able to say that our American physicians have taken and are taking a most important and honorable part.

"It is very certain that but for these discoveries the construction of the Panama Canal, which now since 1904 has been going on with giant strides.

The same to day and he is to be temporary chairman. It is said that his speech is a classic on the Constitution. Senator Brackett is to be permanent chairman. He is to deal more with State issues. Senator Root, William L. Ward, Louis F. Payn and many other well known Republicans arrived here to-day and he is to be temporary chairman. It is said that his speech is a classic on the Constitution. Senator Brackett is to be permanent chairman. He is to deal more with State issues. Senator Root, William L. Ward, Louis F. Payn and many other well known has been going on with giant strides. has been going on with glant strides. Republicans arrived to-night. Senator Root brought along with him several and which will be completed within a suggestions for planks in the platform. Year, would have been impossible. The There is to be a great discussion over effort of the French to build a much this platform and many believe that the

Mr. Roenig does not know if Mr. Depew has arrived from Europe. Senator Brackett started in again to-night to boom Harvey D. Hinman of Broome county for Governor, but other leaders said Hinman wouldn't do, as he has been the lawyer for too many New York corporations. Postmaster Greiner of Buffalo insists that the Henry L. Stimson boom is growing hourly and that Stimson is to be nominated.

NO PAY FOR ARMY DRINKERS. Any Misconduct That Lays Up a Soldier Brings Same Pennity.

WASHINGTON, Sept. 23. Major-Gen. Leonard Wood, Chief of Staff of the army to-day promulgated an order throughout the military service requiring that any officer or enlisted man who "shall be absent from duty on account of disease resulting from his own intemperate use of drugs or alcoholic liquors or other misconduct shall forteit his pay for the period during which he is unable to perform his regular duties."

This order is in accordance with legislation in the army appropriation bill of this year. It is in line with the efforts of the War Department and especially of the Surgeon-General to reduce the amount of dissipation in the army. the military service requiring that any

GIVE OUT DISCOVERIES AT HYGIENE CONGRESS

Carrier of Typhus Fever Has Been Found by American Doctors.

MONKEYS AND MEASLES

Zoo a Bad Place for Children if the Animals Have Disease.

WASHINGTON, Sept. 23. Important discoveries in the matter of the composition of ptomaines, and encouraging experiments toward developing an antidote for the poison used by African natives on their errows and toward fighting off the fatal sleeping sickness and the effects of the tsetse fly on cattle and horses, were described in a popular talk in connection with the Hygiene Congress to-day by Dr. Ludwig Briegor, professor of physical therapeutics and internal medicine in the University of Berlin

Dr. Brieger was for many years asso ciated with Prof. Koch in the development of Koch's lymph and in recen years has been conducting research work and making important discoveries in the world of medical science. Koch's lymph was discredited as

certain cure for consumption in the dis cussions before the American Public Health Association last week. Dr. Knopf of New York and Dr. Kebler of the Federa bureau of chemistry declared that so far there has not been found any certain specific cure for tuberculosis.

Dr. Brieger said that Koch's discovery had been passed over by many specialists as a failure without giving it a thorough trial and that it had proved eminently successful in a great many cases Whether there appears a possibility of a further development in this line Dr Brieger did not say

No Ptomaine Bacilli, Says Brieger Correcting the impression that he had discovered a ptomaine bacillus. Dr. Brieger declared that there are no pto-

"This impression." said he. "was per haps gained from my having found the existence of chemical bodies in ptomaines which are produced by a combination of natural and artificial putrefaction. such as, for example, the natural disso

Through his researches along this line the doctor has become convinced that most infectious diseases are produced by chemical toxine bodies, which are de-veloped by various bacteria in the animal

organism.

Concerning his efforts to produce an antidote for the poison used on arrows the doctor said:

"We discovered that the natives make it from plants that are common in certain sections of Africa. The plants are stewed in water into a sort of porridge, and into this the arrow tips are dipped. This is a very difficult poison to combat, but we haven't abandoned hope." Have Remedy for Sleeping Sickness

Concerning his work done in chemical therapuetics in trypanosomes infection in horses and the sleeping sickness in human beings in certain sections of Africa the German savant said: "These are two very interesting and highly important investigations, and while

bighly important investigations, and while we have made good progress we are yet far from a complishing the end.

"Tests are being conducted in German, English and Belgian colleges, where the inroads are greatest from the testes fly and sleeping sickness.

"We have produced a remedy called prypasafrol, but it is perhaps premature to speak further of this until we can obtain more definite information as to its efficacy in the treatment of cases."

work, have been produced for the most part by Europeans, more particularly in Germany, Austria, France and Switzer-land. Aside from the new discoveries by Dr. Brieger many more will be dis-closed during the week by other foreign specialists, but several of equal if not greater importance are being laid before the world by Americans participating in the congress.

the congress.

While many medical universities are represented, the lead is perhaps taken by the United States Public Health and Marine Heapital Mervice, officials of Marine Hospital Service. officials of which have been working for years on certain lines in order to cope with diseases on which they are specializing.

Two of the officials, Drs. Joseph Holdberger and John F. Anderson, announced two important discourses which they

wo important discoveries which the have made jointly at the opening session to-day of the section on hygiene microbiology and parasitology, of which Prof. Theobald Smith of the Harvard Medical School is president and Prof. William H. Park of the New York Health Department is vice-president. s vice-president

is vice-president.

In a joint paper they announced that the parasite pediculus vestimenti is the latstest known carrier and perhaps the greatest of all carriers of typhus fever. They startled their audience by announcing that their investigations just completed have disclosed nearly 390 cases of typhus in New York alone, all traceable to this cause. There are also to-day a large number of such cases in Chicago. Philadelphia, Baltimore and Washington—in fact in every city where they have

mindelphia. Battimore and Washington—in fact in every city where they have made investigations.

This announcement was surprising to the medical world, since it was thought that typhus had not visited America for some years.

Monkeys Great Source of Measle Another important discovery made by them is that the monkey is one of the leading carriers of measles. "If you don't want measles keep away from the monkey cage," was their motto.

They exploded the old theory that the contagion is carried by scales, declaring the germs are transferred only through nose and mouth secretions. Only pressure

the germs are transferred only through nose and mouth secretions. Only persons coming in close contact with a patient may contract the disease in this way. When a monkey sneezes, which he does frequently when he has the measles, beware, for he throws off millions of germs into the crowd about his cage.

They said that former attempts to infect an imals, with measles in order to study.

They said that former attempts to infect animals with measles in order to study the disease had failed so completely that it was thought the germ was harmless to the lower animals. The peculiar ailment of monkeys in the New York zoo attracted their attention and measles scales were found.

While adults are subject to measles, the disease is confined almost wholly to children, who are most easily infected. The greatest danger of infection, it was declared, is in the earlier stages of the disease, when sneezing and coughing are more common.

In that stage the disease is communi-
